Here is what USDA/AMS had to say:

Midwest: Cream availability continues to tighten. Butter makers say they are still churning at somewhat regular intervals, but few expect cream volumes to hold below the mid-1.20 mark for multiples for much longer. Ice cream manufacturing and Class III cream usage continues to pull tightening cream supplies away from butter churning.

Northeast: Cream availability is not as tight in the Northeast as in other areas of the region. In the Mid-Atlantic, cream supplies are very tight and spot load availability is limited.

West: Cream demand and volumes are in line with the prior week. Cream multiples are unchanged.
